

Case Study

LED Group

Flexible Remote Access

Company Background

LED Group is an Irish owned company which started small and has grown to a dynamic international manufacturing and distribution company that specializes in lighting for the worldwide market. The company, which now has over 300 employees, has been designing and manufacturing lighting and electrical products for over 20 years.

The Challenge

LED needed a comprehensive remote access solution to address the variety of access methods and devices available to employees. Remote employees and home workers needed to access company e-mail and ERP systems over fixed-line broadband connections. Other employees were mobile and needed to get access no matter where they were to e-mail and ERP.

The Solution

With AccessMyLan.com, LED group are able to provide secure remote access to their employees over broadband and mobile networks. Home based workers use their existing broadband service to connect to the office applications via AccessMyLan.com. Mobile workers use laptops equipped with mobile data cards and mobile phones to connect to the office via AccessMyLan.com.

The Benefits

- Provides a single solution for fixed and mobile access
- Easily deployed and managed
- No application changes or upgrades required
- No requirement for e-mail specific handhelds and associated infrastructure

Location

Dublin, Ireland

Industry

Design, manufacture and distribution of lighting solutions.

Value Assessment

" AccessMyLan.com has improved our service levels to our external employees, its ease of deployment and ease of admin make this product a brilliant addition to the services we as an IT department offer to our Internal Customers "

G Seery,
